UNITED STATES DEPARTMENT OF AGRICULTURE
AGRICULTURAL STABILIZATION AND CONSERVATION SERVICE

FOREWORD

The Nevada State ASC Committee and the State office staff are pleased to provide this accounting of 1973 ASCS activities. Your county ASC committeemen, county executive directors and general program assistants are to be complimented on their administration of ASCS programs and their concern for service to Nevada farmers and ranchers.

NEVADA STATE ASC COMMITTEE

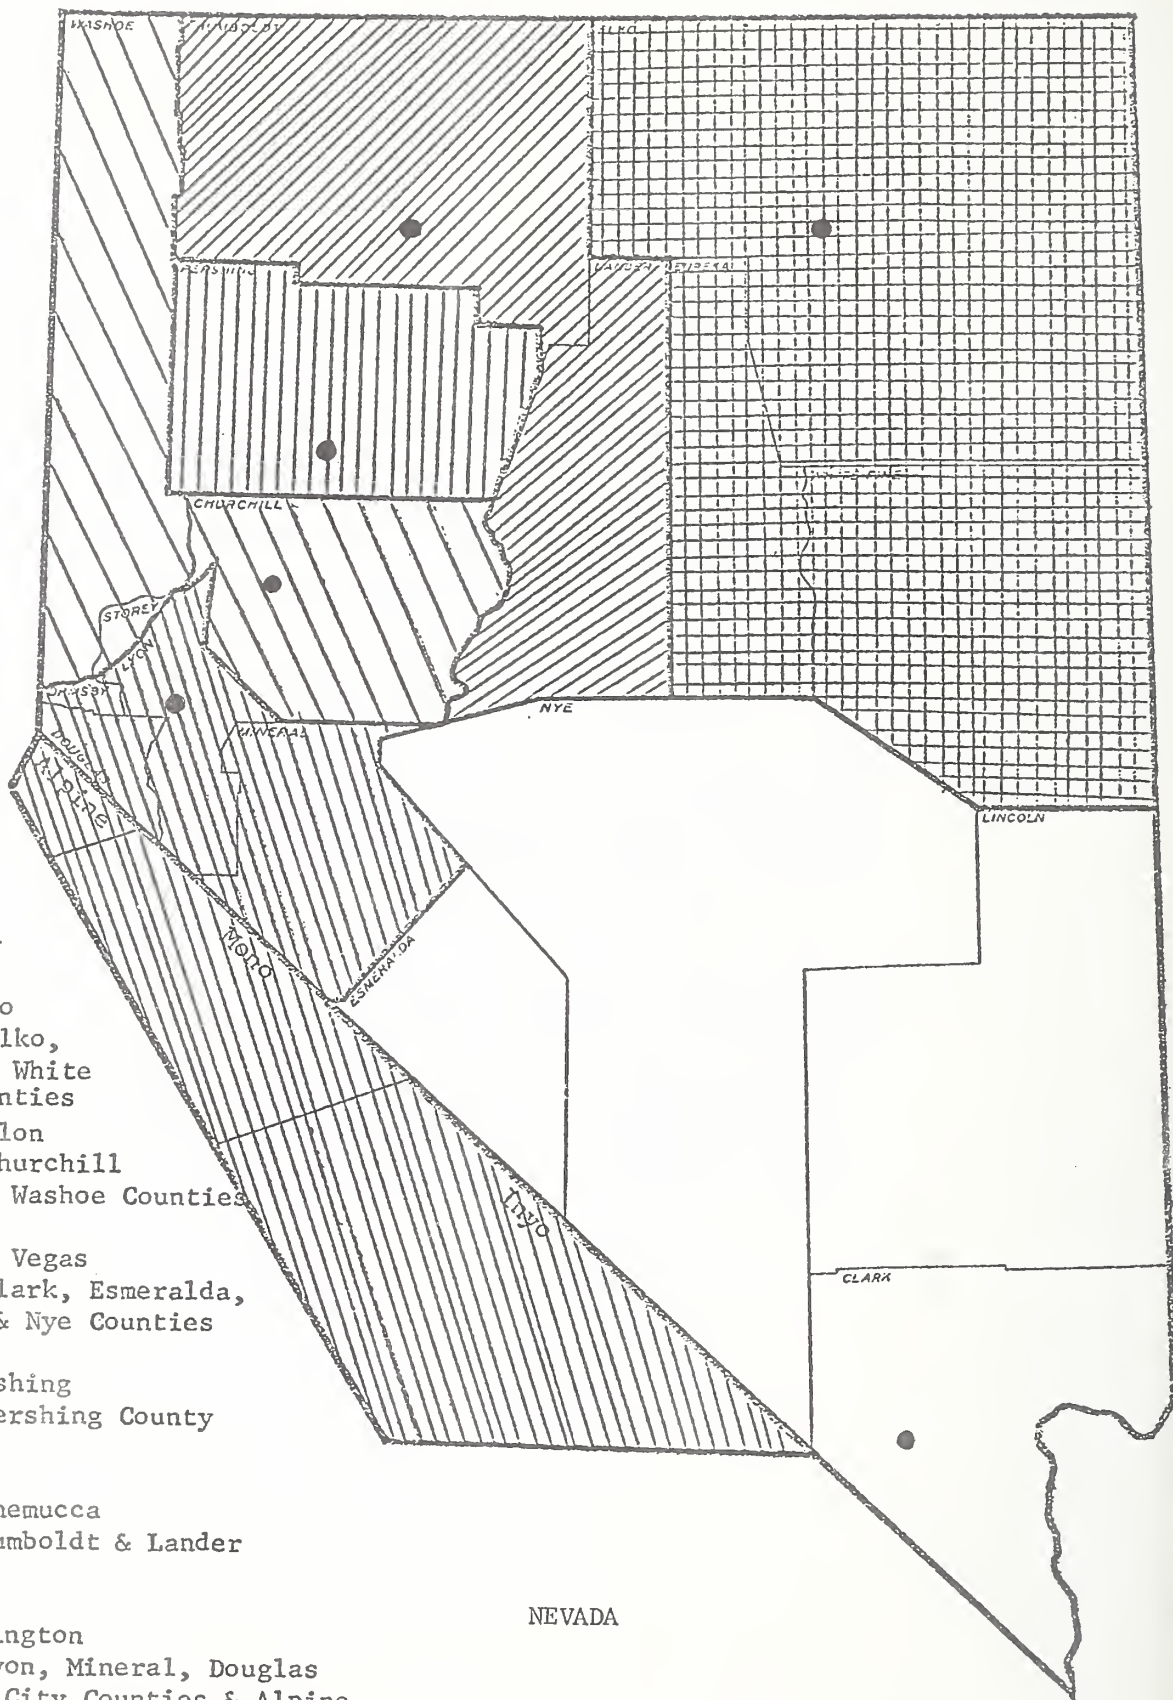

State committeemen are appointed by the Secretary of Agriculture each year. State committees have from three to five members. In Nevada the State committee is composed of three farmers and ranchers representing the various areas and agricultural operations throughout the State. The following is a list of State ASC committeemen and State office personnel serving Nevada in 1973.

NEVADA STATE ASC COMMITTEE

Chairman: Laurence Montero, Box 1010, Winnemucca, NV 89445
Members : Hollis Harris, P.O. Box 244, Pahrump, NV 89041
John Dean Baker, P.O. Box 548, Baker, NV 89311
Dr. Dale W. Bohmont, Director, Cooperative Extension
Service, University of Nevada, Reno, NV 89507

Inyo & Mono Counties in California

NEVADA

1973 COUNTY ASC COMMITTEE ELECTIONS

In November of each year county ASC committee elections are held. The elections are conducted by mail ballot.

Nominees for county ASC committees must be farmers or ranchers actively engaged in their occupation to be eligible as candidates. They must reside in the county in which they would serve if elected and cannot be past 70 years of age. Nominees cannot be members of, or candidates for any county, State or federal office filled by election pursuant to law. County ASC committee candidates may be nominated by petition by their fellow farmers or ranchers in the county. A valid nominating petition must be signed by three eligible voters. If an insufficient number of candidates are nominated by petition, the incumbent county committee will complete the slate of nominees so an election can be held.

All persons owning or operating a farm or ranch and eligible to participate in an ASCS farm program are eligible to vote. Usually a regular member and two alternates are elected annually to the committee. The regular member is elected for a three-year term of office and will serve with two other members elected in previous elections. After each election, an organizational meeting is held and a chairman and vice-chairman are selected from the three regular members. Alternates serve for one year and during the absence of a regular committeeman.

County committees have a most important job. They administer ASCS farm programs at the local level, set the necessary policy to insure the program fits the local situation, and provide agricultural information back to the national ASCS.

Following is a list of county ASC committeemen elected in 1973. Included in the list are the addresses of the county offices and county executive directors of the county offices in Nevada.

Nevada administers ASCS activities for three California counties from the Yerington ASCS Office. Committeemen from Alpine, Inyo, and Mono counties are included in the Yerington combination.

NEVADA COUNTY ASC COMMITTEES

ELKO ASCS OFFICE, Post Office Building, Elko, NV 89801

Inyo County ASC Committee (California)

Chairman	Mike Connor	Box 8, Big Pine, CA 93513
Vice Chairman	K. W. Steward	P.O. Box 404, Big Pine, CA 93513
Regular Member	Jack Tatum	574 Howard St., Bishop, CA 93514

Mono County ASC Committee (California)

Chairman	Ken Strosnider	Box 591, Bridgeport, CA 93517
Vice Chairman	Lyle Sylvester	Coleville, CA 96107
Regular Member	Baldo Giorgi	Topaz, CA 96133

COUNTY OFFICE OPERATING EXPENSES
Calendar Year 1973

Since our last annual report, there has been a reorganization in Nevada. On July 1, 1973, eleven county offices were combined into the present six. As in the past, three California county committees, Alpine, Inyo and Mono, are served by a Nevada county ASCS office. This reorganization was accomplished at a time when ASCS program responsibilities were changed and workload substantially reduced. Although ASCS was faced with a reduction in force, the effects on county office employees were minimized through retirements and vacancies. A review of county office operating expenses reveals substantial savings over the previous year.

Operating funds are allocated county offices for administrative purposes based on ASCS program workload. The nature of this report requires an accounting on a calendar year basis although ASCS like other U. S. government agencies is funded on a fiscal year basis.

The county office expenses are completely computerized through an automatic data system. Collections, checks and personnel documents are optically scanned, computed and collected by a computer system in Kansas City, Missouri, every two weeks.

The table entitled "County Committee Operating Expenses 1973", provides a detailed accounting of the man-days, salaries and other expenses needed to administer the programs on a county office basis.

The second table "1973 ASCS Program and Administrative Summary for Nevada", provides information on program participation in relation to operating expenses on a county as well as county office basis.

RURAL ENVIRONMENTAL ASSISTANCE PROGRAM

On December 22, 1972, the over 30-year old Federal conservation cost-sharing program was unexpectedly terminated. Under the terminated program, county ASC committees could honor only those requests for assistance which were approved on or before the December 22 termination date. As a result, only nine county committees in Nevada had active 1973 Rural Environmental Assistance Programs (REAP). The remaining eight counties had not announced the program and had not issued approvals by the date the REAP was cancelled. The 1973 REAP activities in the nine counties which had active programs are summarized on the following tables.

The Rural Environmental Assistance Program encouraged conservation work by sharing with farmers and ranchers the cost of installing needed soil, water, woodland and wildlife conservation and pollution abatement practices. Generally, the costs are shared on a 50-50 basis. Higher rates of cost-sharing are available to individuals or groups for priority practices. High priority practices include those which reduce farm-related pollution from erosion, animal wastes and agricultural chemicals and provide wide public benefits.

The Rural Environmental Assistance Program (and its predecessor program) had long led the way in the abatement of pollution of, and from our agricultural lands. The numerous erosion control structures and acres of grass and trees planted under the program played the major part in helping keep our streams and rivers clean and our air fresh. Drainage projects have removed polluted ground water to provide a clean environment free of disease and insects. New practices were continually being developed to aid in the accelerated fight against air and water pollution.

The Rural Environmental Assistance Program was a partnership in conservation. This partnership is helping to provide future generations with a productive agricultural industry and a clean environment.

1973 REAP SUMMARY

1973 SET-ASIDE PROGRAMS

The 1973 set-aside programs demonstrated the flexibility of the Agricultural Act of 1970 in achieving its objectives of:

- . Maintaining the production of cotton, feed grains and wheat at levels which will satisfy current needs and provide adequate but not excessive reserves.
- . Protect and improve farm income.
- . Give farmers greater opportunity for decision making to gear their farming operations to commercial markets.
- . Help the United States maintain a competitive position in world markets.

Participation in the 1973 set-aside programs was completely voluntary. A farmer could participate in one or more of the cotton, wheat or feed grain programs depending upon his desires and the allotments and bases established for his farm. Farm bases and allotments for 1973 were based on each farm's past history of producing wheat, feed grains or cotton, particularly in the years 1959 and 1960.

All participants in the three programs were required to maintain the farm conserving base. The conserving base for a farm was equal to the average number of acres devoted to conserving crops and uses in 1959 and 1960, adjusted for new land brought into production or changes in the farming operation. Conserving base acreages could be devoted to conserving crops such as hay or pasture or left idle. Harvesting of the conserving crops was permitted.

Cotton Program. Cotton producers could earn program benefits by enrolling under the program and maintaining the farm conserving base. There was no acreage set-aside requirement under the cotton program. The acreage of cotton that could be planted was not limited but participants had to plant cotton to earn payments. Payments were equal to 15 cents per pound times the cotton yield for the farm times the smaller of the cotton allotment or the acreage planted to cotton.

Wheat Program. Wheat producers were offered two options for participating. Under the basic program, a producer could participate by signing up and maintaining the farm conserving base. There was no set-aside requirement under the basic program nor limit on the acreage of wheat that could be planted. Participants did not have

to plant wheat to earn program payments. Basic wheat program payments were equal to the farm wheat allotment times the farm projected yield times \$.68 per bushel.

Producers could have elected to set-aside acreage from wheat production for payment. Under this option, a producer was required to set-aside an acreage equal to 86 percent of his wheat allotment. No payment, other than the basic program payment, was made on this set-aside. Then an acreage equal to the smaller of 150 percent of the farm allotment or the acreage planted or considered planted to wheat in 1972 could be set-aside for payment. This additional set-aside acreage, plus the wheat planted in 1973, could not exceed the acreage planted or considered planted in 1972. The payment for the additional set-aside equaled the acreage set-aside times the farm projected yield times 88 cents per bushel.

Feed Grain Program. Corn, grain sorghum and barley were included under the 1973 Feed Grain Program. Feed grain producers were also afforded options for participating. Participants were not required to plant feed grains to earn payments under either option.

Under the Zero Set-Aside Plan, a producer could earn program benefits by signing up, maintaining the farm conserving base, and limiting 1973 feed grain plantings to an acreage equal to that planted to feed grains for harvest in 1972. There was no required set-aside under this option. Program payments were based on 50 percent of each feed grain base established for the farm times the projected yield for each commodity times 15 cents for corn, 14 cents for grain sorghum and 12 cents for barley.

Under the 10% Set-Aside Plan, a producer could participate by signing up, maintaining the farm conserving base and setting aside an acreage from feed grain production equal to 10 percent of the total feed grain base. After the conserving base and set-aside acreages were maintained, the remainder of the cropland on the farm could be devoted to feed grains or other crops as the producer desired. Under this option, producers received payments equal to 50 percent of each feed grain base times the projected yield for each commodity times 32 cents for corn, 30 cents for grain sorghum and 26 cents for barley.

Producers selecting program options involving acreage set-aside could also elect to graze or hay the set-aside acreage for a slight reduction in program payments. Participants were also eligible for price support loans and purchases for all program commodities produced on the farm.

PRICE SUPPORT PROGRAMS

Price support programs are designed to (1) help assure stability of farm income and prices, (2) assist in bringing about a better balance between production and consumption, and (3) assist farmers in the orderly marketing of crops. Under these programs, eligible producers are assured of price assistance for a commodity meeting eligibility requirements regardless of fluctuations in the market price. The price support operations are administered by ASCS and financed by Commodity Credit Corporation. Two support methods were used in Nevada during 1973--loans and payments.

Price support loans were available to producers for wheat, corn, grain sorghum, barley, oats, cotton, honey and many other commodities not produced in Nevada. Some of these commodities were also eligible for resale, which is an extension of the loan beyond the maturity date.

Commodity loans permit producers to hold their harvested crops to take advantage of possible increases in market prices. A loan can be repaid with interest when the crop is sold, or the crop under loan can be delivered to CCC, thus satisfying the loan. A producer with a loan is assured of receiving at least the loan price for the crop. 1973 commodity price support loan rates in Nevada were:

Barley.....	\$ 0.90	per bushel
Corn.....	\$ 1.27	per bushel
Grain Sorghum.....	\$ 1.70	per cwt.
Oats.....	\$ 0.71	per bushel
Wheat.....	\$ 1.22	per bushel
Honey		
White and Lighter.....	16.9¢	per pound
Extra Light Amber.....	15.9¢	per pound
Light Amber.....	14.9¢	per pound
Other Table Honey.....	12.9¢	per pound
Nontable Honey.....	12.9¢	per pound

Loans are also available to help producers finance new facilities needed to store crops eligible for price support. These loans are for up to five years and are repaid in four annual installments.

PRICE SUPPORT PAYMENTS - WOOL PROGRAM

The National Wool Act of 1954, as amended, provides that support of the price for wool may be carried out through annual incentive payments to producers. The program is designed to encourage domestic production at a yearly level of 300 million pounds of shorn wool. This policy was established by Congress as a measure for our national security and in promotion of the general economic welfare. The total amount of payments under the Act is limited to 70 percent of the accumulated totals of duties collected on imports of wool and wool products.

A support price for shorn wool, which cannot exceed 110 percent of parity, is announced in advance of the marketing year. The payment of 105.7 percent for 1972 was the percentage needed to bring the average price of 35.0 cents received for wool sold during the marketing year up to the previously announced support level of 72 cents. A payment of \$1.48 per hundred pounds of unshorn lambs sold was also made. This payment was established at a level in relationship to the payment for shorn wool. Unshorn lamb payments were made to avoid unusual shearing prior to marketing in order to obtain the payments on shorn wool.

Wool growers are authorized to organize and conduct advertising and sales promotion activities, financed by deductions from their payments. An agreement between the Secretary and the American Sheep Producers' Council, which was approved in a producer referendum in 1966, is designed to improve the demand for wool and lamb products in the free market. A referendum to continue these activities through 1973 was held in June of 1971.

1973 BEEKEEPER INDEMNITY PAYMENT PROGRAM

Under Public Law 91-524, the Secretary of Agriculture is authorized to make indemnity payments to beekeepers who, through no fault of their own, suffer losses of honey bees as the result of the use of pesticides near the property on which his bees were located.

The program has been in effect since 1971. Retroactive indemnity payments could have been made for losses which occurred after January 1, 1967. In Nevada all retroactive payments were made in the 1972 calendar year. In 1973 indemnity payments were made for losses which occurred in the 1972 program year. The Agriculture and Consumer Protection Act of 1973 extended the program through 1977.

Applications for indemnity payments were required to be filed with the ASCS county office serving the beekeeper's headquarters. Payments in Nevada during 1973 totaled \$29,027 for three beekeepers, two in Churchill County and one in Lyon County.

LIVESTOCK FEED PROGRAM

The Agricultural Act of 1949, as amended, provides for a livestock feed program whereby the Commodity Credit Corporation (CCC) may sell grain to disaster stricken livestock producers at a reduced rate. The objective of the program is to preserve and maintain livestock breeding herds and prevent widespread liquidation of livestock because of drought, floods, or other natural disaster. The program is administered through county ASC committees and is available to producers who have substantial loss of their livestock feed crops because of the emergency and are financially unable to purchase the needed feed on the open market. The CCC-owned grain is sold to eligible producers at a rate amounting to 75 percent of the county loan rate for the grain to be fed to the primary livestock. A slightly higher rate is charged for grain fed to livestock which are not considered part of the breeding or foundation and are referred to as secondary livestock.

A livestock feed program was approved for Lincoln County in October 1972. Lincoln County was declared a disaster area by the Governor of Nevada and the Secretary of Agriculture because of severe drought conditions during the spring and summer of 1972. The program was effective from November 1, 1972 through June 10, 1973. Producers were given until July 10 to feed up grain purchased under the program. Grain deliveries were delayed because of a railroad car shortage which created hardships for many of the eligible producers. The CCC grain was delivered to two points in Lincoln County; one at Caliente, the second at Hiko. Producers were responsible for delivery of the grain from these points to their ranches and for the processing of the grain. Producers could purchase corn, milo, or oats. The following is a brief summary of program activities:

Number of Applicants	31
Number of Producers Receiving Grain	29
Number of Cattle to Which Grain Was Fed	10,895
Total Pounds of Grain Purchased	2,601,030
Total Dollars Paid for Grain	\$43,733.06
Average Cost Per Ton of Grain	\$33.63

1973 COMPLIANCE OPERATIONS

The success of all ASCS farm programs in achieving their goals and objectives depends upon participants strictly complying with program requirements. County ASC committees and office personnel, under the direction of the Nevada State ASC Committee, are responsible for insuring producer compliance with program provisions. The compliance workload in county ASCS offices was greatly increased in 1973 over that in previous years because of the increased participation under the set-aside programs.

Set-Aside Programs. Compliance with set-aside program provisions is determined by farmers visiting the county ASCS office to report program acreages and to certify that the farm has met all program requirements. Farmers, when certifying, are expected to accurately report program acreages. Failing to do so may subject the farm to loss of all program benefits. County ASCS office personnel check 25 percent of the reporting farms to maintain program control and to insure certifications are accurate.

Measurement Service. Measurement service is offered in all Nevada counties. This service includes measuring and staking areas before planting, measuring land after planting, or measuring areas for any program the farmer requests. Producers may also request measurement of quantities of farm stored commodities and inspection of bee losses under the Beekeeper Indemnity Payment Program. Measurement service assures the participant that program acreage provisions will be met and eliminates the need for acreage adjustments after planting and the possibility of loss of program benefits.

The entire cost of the measurement service is paid for by the producer.

REAP Compliance. County ASC committees also had the compliance responsibilities for REAP conservation practices for which the technical responsibility has not been assigned to another agency. County office employees are required to check enough of these practices (at least 5 percent) to determine whether or not plans and specifications have been followed by the farmer. Farms participating in REAP are also checked to insure that practices were being maintained according to program policies. The records of vendors providing conservation materials and services (CMS) under REAP were also subject to spotchecks.
